## SKILLS

### Programming

Java, JavaScript, SQL, C, C++

### Frontend

React.js, Redux, HTML5, CSS3, Tailwind, Bootstrap, Material UI, EJS

### Backend

Node.js, Express.js, REST API, JWT, Passport.js

### Databases

MySQL, MongoDB, PostgreSQL, Redis, Supabase

### Tools

Git, Cloudinary, Razorpay, Stripe, Mapbox, Socket.io, WebRTC, node-cron, Winston

### Concepts

DSA, OOPs, DBMS, OS, CN, MVC Architecture

## EDUCATION

### B.Tech – Information Technology

University of Kalyani, Kalyani  
**CGPA: 7.5**  
2023 – 2027

### Higher Secondary (12th)

Kendriya Vidyalaya No.1 Salt Lake, Kolkata  
**74%**  
2022

### Matriculation (10th)

Kendriya Vidyalaya No.1 Salt Lake, Kolkata  
**84%**  
2020

## PROJECTS

### GolfGive – Golf Charity Subscription Platform [GitHub](#) | [Live](#)

Node.js, Express.js, React.js, Supabase (PostgreSQL), Stripe, JWT, node-cron, Winston, Vercel

- Architected a full-stack charity subscription platform with a 40+ endpoint REST API across 8 modules (auth, subscriptions, scores, draws, charities, winners, users, analytics).
- Integrated Stripe Checkout and webhook handlers for recurring monthly/yearly subscriptions, processing events with zero missed payment records via idempotent webhook design.
- Built a dual-mode draw engine — random (cryptographic seed) and weighted algorithmic — to statistically advantage rare score entries; automated monthly draws via node-cron with a 3-tier prize pool (40% jackpot rollover, 35%, 25%).
- Enforced rolling 5-score rule at the PostgreSQL trigger level, eliminating DB-bypass vulnerabilities; implemented JWT refresh token rotation with invalidation on every cycle.
- Built React 18 + Zustand frontend with Axios JWT-refresh interceptors across 12+ pages (dashboard, admin panel, charity directory, draw listings); deployed on Vercel with Jest + Supertest tests.

### GlobeHaven – Full Stack Travel Web App [GitHub](#) | [Live](#)

Node.js, Express.js, MongoDB, Mongoose, EJS, Bootstrap 5, Mapbox API, Razorpay, Passport.js, Cloudinary, Render

- Built a full-stack MVC travel platform with complete property listing CRUD and multi-image upload per listing; RESTful routes reduced average request handling time by ~30%.
- Integrated Razorpay payment gateway with server-side order creation and webhook signature verification, enabling secure booking transactions with real-time status updates.
- Configured Cloudinary + Multer pipeline for multi-file image uploads with automatic CDN delivery, reducing image load latency by ~40% vs self-hosted storage.
- Implemented Passport.js Local Strategy with salted password hashing; authorisation middleware ensures users only modify their own listings; Joi validation blocked 100% of malformed payloads.
- Built a full reviews & ratings system with CRUD, user-scoped ownership enforcement, and cascading delete; mobile-responsive Bootstrap 5 + EJS UI deployed on Render.

### VideoConf – Real-Time Video Conferencing & Chat [GitHub](#) | [Live](#)

React.js, Node.js, Express.js, MongoDB, WebRTC, Socket.io, Material UI, JWT, bcrypt, Render

- Engineered a full-stack multi-user video conferencing app using WebRTC peer connections achieving sub-200ms average connection latency with room-based session management.
- Built bi-directional live chat with Socket.io achieving <50ms message delivery latency via persistent WebSocket connections, with real-time room-level broadcasting and typing indicators.
- Added screen sharing via MediaDevices API (getDisplayMedia), enabling live switching between camera and screen share without dropping existing peer connections.
- Developed RESTful APIs for user auth, meeting creation, and room management; secured all endpoints with JWT access tokens + bcrypt password hashing (10 salt rounds); configured CORS.
- Modelled user profiles and meeting sessions with MongoDB + Mongoose; designed accessible UI with Material UI reducing UI dev time by ~25%; deployed full-stack on Render.
